Tropical Wind in Thailand

 Thailand

PROJEKT-ID: 1997 FZ-ID: 2406

**FOKUS
ZUKUNFT**

Access to clean and affordable wind energy

The aim of the project activity is to generate clean electricity through the use of wind energy. The project consists of 30 Vestas wind turbine generators with a capacity of 3.0 MW each. The wind turbine generators of the project will be installed in Wangyaithong and Bueng Prue sub-districts of Thepharak district, Nakhonratchasima province, Thailand.

All wind turbine generators of the project activity were commissioned on September 28, 2018. The electricity generated by the project is fed into Thailand's national grid.

Overview of the project data:

Tropical Wind in Thailand

The project contributes to the following sustainability goals:

Affordable and Clean Energy:

The wind power project promotes affordable and clean energy through the use of wind power as a renewable energy source, providing a sustainable and environmentally friendly alternative to fossil fuels.

Decent Work and Economic Growth:

The project supports sustainable economic growth in the region by investing in the construction and operation of the wind farm and thus creating jobs in the local renewable energy sector.

Climate Action

The wind power project makes a decisive contribution to climate protection by reducing dependence on fossil fuels and cutting greenhouse gas emissions.
